Professional summary

McMaster Computer Science co-op student (expected Apr. 2028) who ships production software outside the classroom: a full-stack course planning platform used by **over 200 McMaster students** (React, TypeScript, Go, PostgreSQL), tested FastAPI and PostgreSQL endpoints, and Playwright automation that replaced hand-entry of **400+ events**. Available for Winter 2027 and Summer 2027 terms.

Education

McMaster University Expected Apr. 2028
Honours Bachelor of Applied Science, Computer Science (Co-op) *Hamilton, ON*
Faculty of Engineering Award of Excellence (Top 10%)

Work experience

Ressam Gardens Jun. 2026 - Present
Web Developer *Hamilton, ON*

- Built and shipped a responsive 10-page production site for a memory care community, verifying every release across mobile, tablet, and desktop layouts
- Wrote verification scripts that enforce byte-identical navigation and footers across all 10 pages, catching regressions before they reach the client
- Iterated the codebase through 15 rounds of client review, turning non-technical feedback into scoped build plans for each release

Mount Hamilton United SC May 2026 - Aug. 2026
Administration Assistant *Hamilton, ON*

- Automated league schedule entry with a Playwright and TypeScript driver against the club's registration platform, entering and auditing 400+ events previously booked by hand
- Built an inventory logging web app with a transaction log that automatically tracks per-colour and per-size stock, exchanges, and pickups, and sends pickup emails as gear goes out and comes back
- Built a Power Automate flow that files volunteer document scans into SharePoint and updates a compliance tracker without manual entry
- Built error handling into the club's automations and wrote handover documentation so staff could keep running them after my term ended

Canadian Motorcycle Tourism Association Mar. 2026 - Apr. 2026
Software Developer *Remote*

- Built an event promotion automation tool in React, Vite, and TypeScript, deployed on Vercel, replacing a manual cross-platform social posting workflow
- Integrated the Google Gemini API for structured event extraction from posters and platform-specific caption generation
- Wrote a serverless proxy to work around CORS on the OnlySocial publishing API

Morphace Skincare Feb. 2026 - Apr. 2026
Software Developer *Remote*

- Built FastAPI and PostgreSQL endpoints, with error handling, for sensor data storage, calibration logic, and user-specific data retrieval
- Shipped the reminders feature end to end. Authored the technical proposal, chose the notification architecture, and built the working Swift implementation using iOS local notifications and on-device persistence
- Wrote pytest suites against the API endpoints to validate data flows ahead of feature releases

Projects

MacTrack | *React, TypeScript, Go, PostgreSQL, Python* Feb. 2026 - Present

- Full-stack course planning and seat-tracking platform built with a team of four and used by over 200 McMaster students.
- Go backend services for course monitoring and notification logic that suppresses redundant alerts, fed by a Python scraper.
- Migrating the dashboard and degree planner into a single view using a strangler-fig pattern, and running Dependabot security sweeps across Go, Python, and frontend dependencies.

Room Radar | *TypeScript, Node.js, Playwright, React* May 2026 - Present

- Scrapes university timetable data with an automated Playwright script and transforms raw XML into room-centric availability JSON.
- Normalized large timetable datasets into a queryable format supporting real-time filtering by building, day, and time.
- Scheduled the scrape as a GitHub Actions cron job so room data refreshes without manual runs.

Skills

Languages: Python, TypeScript, Go, C, Swift, JavaScript, SQL, HTML/CSS
Frameworks & Tools: React, Tailwind, FastAPI, Vite, Node.js, Playwright, pytest, Git, GitHub Actions, Docker, Excel
Databases & Services: PostgreSQL, Supabase, Vercel
AI Tools: Claude Code, Codex, Gemini API
